Technical articles

A

ADVANCED TECHNOLOGY

Continuous operation is near for uncooled diode lasers p. 95 Jan. 10
Filling in the blanks in the laser's spectrum p. 82 Apr. 18
Holography's practical dimension p. 88 July 25
Lenses guide optical frequencies to low-loss transmission p. 83 May 16
Many colors are better than one p. 84 July 11
Storing data with light p. 82 Feb. 21
Training a machine to read with nonlinear threshold logic p. 86 Aug. 22
Vortexes are creating a stir in the superconductor field p. 100 June 13

AMPLIFIERS

Amplifier provides 10^{15}-ohm input resistance p. 99 Aug. 22
Amplifiers and triggers simulate blood pressure p. 68 Oct. 31
Bias control and low parasitics shorten amplifier rise time p. 73 Jan. 24
D-c logarithmic amplifier compresses input current p. 91 May 16
Direct-coupled amplifier cuts cost of d-c voltmeter p. 109 June 13
Fast-pulse amplifier drives 50-ohm load p. 76 Jan. 24
Glass reed switch controls operational amplifier p. 97 Aug. 22
Hydrophone preamplifier cuts cable noise p. 120 Aug. 8
IC amplifier provides variable reference voltage p. 88 Oct. 17
Linear amplifier circuit eliminates transformers p. 99 Mar. 21
Logarithmic amplifier has 66-db range p. 89 Oct. 17
Low-pass amplifier with adjustable bandwidth p. 90 May 30
Nomograph finds output voltage error p. 126 Nov. 14
Overload protection for d-c amplifier p. 91 Apr. 4
Sense amplifier fits any memory p. 89 Sept. 5

ANTENNAS

Faster, lighter 3-D radars in sight for tactical warfare p. 80 June 27
Helix antennas take turn for better p. 100 Aug. 22

AVIONICS

Air navigation system testing grounded by signal simulator p. 151 Sept. 19
Built-in testing, once a luxury, is essential for mission success p. 103 Oct. 17
Computers save time and missions p. 109 Oct. 17
Divic gives answers to complex navigation questions p. 105 Sept. 5

C

CIRCUIT DESIGN

Adjustable current limiter for regulated power supply p. 107 Mar. 7
Analyzing networks with state variables p. 63 Dec. 26
AND gate protects system should the voltage fail p. 79 July 11
Agc amplifier handles 60-db range p. 81 Nov. 28
Agc circuit possesses 60 decibel gain p. 107 Dec. 12
Bias control and low parasitics shorten amplifier rise time p. 73 Jan. 24
Bistable multivibrator immune to noise p. 97 Mar. 21
Bipolar pulse generator tests fast flip-flops p. 109 Dec. 12
Charge feedback increases pulse-rate meter accuracy p. 85 Feb. 7
Circuit protects meter from periodic current spikes p. 108 June 13
Circuit samples a signal, holds it up to 1 minute p. 106 Oct. 3
Clip couples neon oscillators p. 77 May 2
Computer-aided design, part 1: Man-machine merger, The p. 110 Sept. 19
Computer-aided design, part 2: Computer excels as analyst, The p. 68 Nov. 28
Computer-aided design, part 3: Analyzing circuits with symbols p. 92 Dec. 12
Control is accurate to 0.01° C p. 111 June 13
Converting audio oscillators to square-wave generators p. 123 Aug. 8
Current dividers convert digital signals into analog voltages p. 142 Nov. 14
Curves speed design of multiplier circuits p. 104 Jan. 10
D-c converter circuit capacitors p. 97 Mar. 21
Delay circuit varies turn-on, turn-off p. 92 Apr. 4
Detector stores peaks of video bursts p. 104 Oct. 3
Differential discriminator rejects common mode noise p. 101 July 25
Diode and resistor increase input resistance of Schmitt p. 110 June 13
Diode bias replaces batteries in logarithmic converter p. 123 Nov. 14
Diode quad modulator suppresses carrier 65 db p. 97 Apr. 18
Direct-coupled amplifier cuts cost of d-c voltmeter p. 109 June 13
Direct current regulator drives fluorescent lamps p. 94 Aug. 22
Electronic thermostat controls temperature to within 0.1° C p. 100 Jan. 10
Exclusive OR circuit requires no voltage supply p. 94 Apr. 18
Fail-safe frequency divider p. 127 Sept. 19
Fast-pulse amplifier drives 50-ohm lead p. 76 Jan. 24
Fast-pulse generator tests digital circuit delay p. 88 Feb. 21
Feedback choke reduces power supply ripple p. 74 June 27
Feedback improves parallel-T filter p. 99 Sept. 5
Feedback turns fixed capacitor into variable capacitance p. 80 Nov. 28
FET converts transducer for use in a-c bridge p. 84 Feb. 7
FET insures stable sawtooth wave p. 122 Aug. 8
FET's call the tune in active filter design p. 98 Oct. 3
For a good mixer, add one FET p. 109 Mar. 21
Forward feed stabilizes d-c differential amplifier p. 84 Nov. 28
Frequency-modulated output from low-cost unijunction p. 122 Nov. 14
Front-end nuvistor lowers transistor amplifier noise p. 71 Oct. 31
Full-wave detector without transformer p. 100 July 25
Gamble that paid off, The: a solid state 50-Mhz oscilloscope p. 95 July 25
Gate varies rewards from teaching machine p. 92 May 16
Getting the most out of feedback p. 66 Jan. 24
High-speed level shifter p. 105 Mar. 7
High-speed wideband gate provides 70-db isolation p. 69 Oct. 31
High voltage, high current in electro-optic modulator p. 98 Mar. 21
Hydrophone preamplifier cuts cable noise p. 120 Aug. 8
Interlock protects display tube p. 125 Sept. 19
Latching gate removes counter ambiguity p. 91 Apr. 4

Linear amplifier circuit eliminates transformers p. 99 Mar. 21
Low-cost emitter-follower extends voltmeter's range p. 87 Feb. 7
Low-cost strobe built with scr in trigger p. 80 July 11
Low-current alarm p. 105 Mar. 7
Low-drift current generator compensates for temperature p. 108 June 13
Low-frequency oscillator supplies high pulse power p. 90 Oct. 17
Low-pass amplifier with adjustable bandwidth p. 90 May 30
Multirange d-c voltmeter p. 126 Sept. 19
Multivibrator controls single-diode gate p. 101 July 25
Multivibrator provides continuous phase control p. 102 July 25
New twist for backward diode: help from low-noise amplifier p. 74 July 11
Nomograph finds output voltage error p. 126 Nov. 14
Nomographs calculate values for twin-T notch filter p. 88 Apr.18
No pulse-forming network in scr trigger generator p. 97 Sept. 5
One-megahertz flip-flop saves standby power p. 106 June 13
One-shot multivibrator with zero recovery time p. 75 Jan. 24
Pairing Schmitt triggers producers lower hysteresis and faster switching p. 75 Nov. 28
Period of sawtooth ramp extends to 5 hours p. 78 June 27
Powerful logic from power-less circuits p. 133 Mar. 7
Power supply reduces ripple by varying series resistance p. 74 Jan. 24
Pulsed oscillator conserves power p. 98 Aug. 22
Reducing transients in switched inductive loads p. 88 Oct. 17
Ringing choke simplifies d-c to d-c conversion p. 90 Apr. 18
Sawtooth generator drives cathode-ray tube p. 124 Sept. 19
Scattering parameters speed design of high-frequency transistor circuits p. 78 Sept. 5
Scr bridge inverter eliminates transformers p. 98 Sept. 5
Scr triggered by capacitor lowers cost of oven control p. 83 Nov. 28
Series gating reduces components in counter p. 81 July 11
Series regulator gives overload protection p. 104 July 25
Silicon switch turns off stalled servomotors p. 90 May 16
Simple mercury relay circuit develops single clean pulse p. 89 Feb. 21
Simulator circuit generates video or noise pulses p. 78 May 2
Single component changes bandpass into filter p. 95 Apr. 18
Square-law detector has 40-db dynamic range p. 95 Sept. 5
Suppressed carrier modulator with noncritical components p. 70 Oct. 31
Switch converts multivibrator from a stable to one-shot p. 80 Nov. 28
Switching amplifier converts unipolar to bipolar pulses p. 103 Oct. 3
Thermistor measures negative resistance of tunnel diode p. 95 Aug. 22
Thermistor regulator provides fast response p. 106 Mar. 7
Time will tell how fast a motor revs up p. 82 Nov. 28
Topology cuts design drudgery p. 112 Nov. 14
Transistor switch for clickless keying p. 68 Oct. 31
Transmission lines couple multiple-driver receivers p. 121 Aug. 8
Triangle waveform generator resets automatically p. 78 July 11
Tuning fork drives portable frequency standard p. 122 Nov. 14
Tunnel-diode pulser measures cable delay p. 87 Feb. 21
Tunnel diodes lock output of servocircuit p. 106 Dec. 12
Two events, in sequence, produce detector output p. 120 Aug. 8
Two unijunction transistors produce three-state circuit p. 100 Jan. 10
Unijunction controls spacing between pulses p. 82 July 11
Using strip transmission line to design microwave circuits, part I p. 72 Feb. 7
Using strip transmission line to design microwave circuits, part II p. 90 Feb. 21
Using transistor circuits to multiply and divide p. 109 Apr. 4
Voltage-controlled multi produces triangular output p. 72 Oct. 31
Voltage splitter balances floating power supply p. 96 Mar. 21
Warning lights monitor d-c supply voltage p. 106 Dec. 12

COMMUNICATIONS

Adding scr's to get high power means smaller transmitters p. 119 June 13
Automated ground station will check out Saturn p. 103 Feb. 7
Bit by bit, Japan is speeding its data communications links p. 147 Dec. 12
Communications satellites: 1966 and beyond p. 83 May 2
Communications satellites, part 2: Design choices for the future p. 109 May 30
Dial any channel to 500 Mhz p. 60 May 2
Double-phase-shift keying speeds data over voice channels p. 91 Oct. 31
For a pilot over the ocean a satellite link to home p. 100 May 2
Helix antennas take turn for better p. 100 Aug. 22
Integrated circuits and pulse coding mean new gains for telephony p. 139 Sept. 19
Japanese stay with pcm to meet mushrooming growth in telephony p. 134 Dec. 12
Latest word in space talk: it can come from anywhere p. 117 May 30
Lenses guide optical frequencies to low-loss transmission p. 83 May 16
Messages sent in symbols will link multilingual troops p. 108 July 25
Military services' satellites will ring the earth p. 96 May 2
Nomograph simplifies design of f-m/f-m telemetry systems p. 101 Mar. 21
Pcm telephone exchange switches digital data like a computer p. 119 Oct. 3
Satellites to be airliners' traffic cop p. 104 May 2
Tunnel-diode oscillator expands f-m system's channel capacity p. 105 Jan. 10

COMPONENTS

Harmonic testing pinpoints passive component flaws p. 93 July 11
Looking through glasses for new active components p. 129 Sept. 19
Putting semiconductors to work p. 95 Feb. 7
Tiny filters block the path of radio-frequency interference p. 58 Oct. 31
Voltage transients tamed by spark-gap arresters p. 109 Apr. 18

COMPUTERS

Automated ground station will check out Saturn p. 103 Feb. 7
Automatic diagnosis of engine ailments p. 70 May 2
Bit by bit, Japan is speeding its data communications links p. 147 Dec. 12
Complex integrated circuit arrays: the promise and the problems p. 111 July 11
Computer-aided design, part 1: Man-machine merger, The p. 110 Sept. 19
Computer-aided design, part 2: Computer excels as analyst, The p. 68, Nov. 28
Computer-aid designs, part 3: Analyzing circuits with symbols p. 92 Dec. 12
Computers save time and missions p. 109 Oct. 17
Current dividers convert digital signals into analog voltages p. 142 Nov. 14
Divic gives answers to complex navigation questions p. 105 Sept. 5
Fast-moving queue for better computer service p. 102 Jan. 24
For a crew in lonely orbit, something to lean on in space p. 129 Oct. 3
Great shmoo plot, The: testing memories automatically p. 127 July 25
Integrated circuits replace the electromechanical resolver p. 90 Jan. 10
Integrated scratch pads sire new generation of computers p. 118 Apr. 4
On the horizon: better hospital care through computer time-sharing p. 93 Jan. 24
Power switching trims digital system weight, cost p. 135 June 13
Sense amplifier fits any memory p. 89 Sept. 5
Success story: Japanese originals p. 93 June 27
Time-shared troubleshooter repairs computer on-line p. 97 Jan. 24
Wiring design helps core memory work at rapid cycle time p. 83 Oct. 31

CONSUMER ELECTRONICS

For a good mixer, add one FET p. 109 Mar. 21
Integrated circuits make a low-cost f-m receiver p. 133 Aug. 8
Multipurpose chips cut costs of f-m receiver p. 80 May 16
No moving parts in auto tachometer p. 77 May 2
P-i-n diode and FET's improve f-m reception p. 115 Aug. 22
Simpler circuits trace Sony's path to innovation p. 155 Nov. 14
Solid state makes debut in big screen color tv p. 99 Apr. 18

D

DESIGNER'S CASEBOOK

Adapter for curve tracer tests FET's at high voltage p. 104 Mar. 7
Adding transistors makes voltage shifter adjustable p. 108 Dec. 12
Adjustable current limiter for regulated power supply p. 107 Mar. 7
Agc amplifier handles 60-db range p. 81 Nov. 28
Agc circuit possesses 60-decibel gain p. 107 Dec. 12
Amplifier provides 10^{15}-ohm input resistance p. 99 Aug. 22
Amplifiers and triggers simulate blood-pressure p. 68 Oct. 31
AND gate protects system should the voltage fail p. 79 July 11
Audio discriminator measures large frequency changes p. 76 May 2
Bias control and low parasitics shorten amplifier rise time p. 73 Jan. 24
Biasing on FET for low drift p. 92 May 30
Bipolar pulse generator tests fast flip-flops p. 109, Dec. 12
Bistable multivibrator immune to noise p. 97 Mar. 21
Breadboarding IC systems with color-coded modules p. 102 Jan. 10
Capacitor charging controls variable ramp generator p. 91 May 30
Charge feedback increases pulse-rate meter accuracy p. 85 Feb. 7
Circuit protects meter from periodic current spikes p. 108 June 13
Circuit samples a signal, holds it up to 1 minute p. 106 Oct. 3
Clip couples neon oscillators p. 77 May 2
Control is accurate to 0.01° C p. 111 June 13
Converting audio oscillators to square-wave generators p. 123 Aug. 8
Cross-coupled transistors form balanced mixer p. 91 Oct. 17
Curves speed design of multiplier circuits p. 104 Jan. 10
D-c converter circuit uses capacitors p. 97 Mar. 21
D-c logarithmic amplifier compresses input current p. 91 May 16
Delay circuit varies turn-on, turn-off p. 92 Apr. 4
Detector stores peaks of video bursts p. 104 Oct. 3
Differential discriminator rejects common-mode noise p. 101 July 25
Diode and resistor increase input resistance of Schmitt p. 110 June 13
Diode bias replaces batteries in logarithmic converter p. 123 Nov. 14
Diode lowers multi's reset power level p. 76 June 27
Diode quad modulator suppresses carrier 65 db p. 97 Apr. 18
Direct-coupled amplifier cuts cost of d-c voltmeter p. 109 June 13
Direct current regulator drives fluorescent lamps p. 94 Aug. 22
Electronic thermostat controls temperature to within 0.1° C p. 100 Jan. 10
Emitter follower enhances oscillator's frequency variation p. 73 Dec. 26
Exclusive OR circuit requires no voltage supply p. 94 Apr. 18
Fast-pulse amplifier drives 50-ohm load p. 76 Jan. 24
Fast pulse generator tests digital circuit delay p. 88 Feb. 21
Feedback choke reduces power supply ripple p. 74 June 27
Feedback improves parallel-T filter p. 99 Sept. 5
Feedback turns fixed capacitor into variable capacitance p. 80 Nov. 28
Ferrite cylinder modulates microwave signals p. 96 Aug. 22
FET converts transducer for use in a-c bridge p. 84 Feb. 7
FET insures stable sawtooth wave p. 122 Aug. 8
FET's produce stable oscillators p. 102 Oct. 3
FET stabilizes amplitude of Wien bridge oscillator p. 107 Oct. 3
Forward feed stabilizes d-c differential amplifier p. 84 Nov. 28
Frequency-modulated output from low-cost unijunction p. 122 Nov. 14
Front-end nuvistor lowers transistor amplifier noise p. 71 Oct. 31
Full-wave detector without transformer p. 100 July 25
Gate varies rewards from teaching machine p. 92 May 16
Glass reed switch controls operational amplifier p. 96 Aug. 22
High MOS impedance benefits pH measurement p. 79 July 11
High-speed level shifter p. 105 Mar. 7
High-speed wideband gate provides 70 d-b isolation p. 69 Oct. 31
High voltage, high current in electro-optic modulator p. 98 Mar. 21
Hydrophone preamplifier cuts cable noise p. 120 Aug. 8
IC amplifier provides variable reference voltage p. 88 Oct. 17
Integrated circuits quickly assembled p. 103 July 25
Interlock protects display tube p. 125 Sept. 19
Latching gate removes counter ambiguity p. 91 Apr. 4
Light-sensitive FET p. 124 Nov. 14
Linear amplifier circuit eliminates transformers p. 99 Mar. 21
Logarithmic amplifier has 66-db range p. 89 Oct. 17
Low-cost emitter-follower extends voltmeter's range p. 87 Feb. 7
Low-cost strobe built with scr in trigger p. 80 July 11
Low-current alarm p. 105 Mar. 7
Low-drift current generator compensates for temperature p. 108 June 13
Low-frequency oscillator supplies high pulse power p. 90 Oct. 17
Modified tape recorder stores timing signals p. 75 June 27
Multivibrator controls single-diode gate p. 101 July 25
Multivibrator provides continuous phase control p. 102 July 25
Neon tube staircase generator performs two jobs p. 74 Dec. 26

No moving parts in auto tachometer p. 77 May 2
No pulse-forming network in scr trigger generator p. 97 Sept. 5
One-megahertz flip-flop saves standby power p. 106 June 13
One-shot multivibrator with zero recovery time p. 75 Jan. 24
Overload protection for d-c amplifier p. 91 Apr. 4
Period of sawtooth ramp extends to 5 hours p. 78 June 27
Power supply reduces ripple by varying series resistance p. 74 Jan. 24
Pulsed oscillator conserves power p. 98 Aug. 22
Reading and writing with electron beams p. 80 May 30
Reducing transients in switched inductive loads p. 88 Oct. 17
Sawtooth generator drives cathode-ray tube p. 124 Sept. 19
Scr bridge inverter eliminates transformers p. 98 Sept. 5
Scr triggered by capacitor lowers cost of oven control p. 83 Nov. 28
Series gating reduces components in counter p. 81 July 11
Series regulator gives overload protection p. 104 July 25
Silicon switch turns off stalled servomotors p. 90 May 16
Simple mercury relay circuit develops single clean pulse p. 89 Feb. 21
Simulator circuit generates video or noise pulses p. 78 May 2
Single component changes bandpass into general filter p. 95 Apr. 18
Square-law detector has 40-db dynamic range p. 95 Sept. 5
Suppressed carrier modulator with noncritical components p. 70 Oct. 31
Switch converts multivibrator from a stable to one-shot p. 80 Nov. 28
Switching amplifier converts unipolar to bipolar pulses p. 103 Oct. 3
Thermistor measures negative resistance of tunnel diode p. 95 Aug. 22
Thermistor regulator provides fast response p. 106 Mar. 7
Time will tell how fast a motor revs up p. 82 Nov. 28
Transistor switch for clickless keying p. 68 Oct. 31
Transmission lines couple multiple-driven receivers p. 121 Aug. 8
Transistors control small d-c motor p. 93 Apr. 4
Transistors replace diodes in milliohmmeter circuit p. 97 Sept. 5
Triangle waveform generator resets automatically p. 78 July 11
Tuning fork drives portable frequency standard p. 122 Nov. 14
Tunnel-diode pulser measures cable delay p. 87 Feb. 21
Tunnel diodes lock output of servocircuit p. 106 Dec. 12
Two events, in sequence, produce detector output p. 120 Aug. 8
Two unijunctions form low-cost level detector p. 94 Apr. 18
Two unijunction transistors produce a three-state circuit p. 100 Jan. 10
Unijunction controls spacing between pulses p. 82 July 11
Unijunction memory stores until readout p. 125 Nov. 14
Voltage-controlled multi produces triangular output p. 72 Oct. 31
Voltage splitter balances floating power supply p. 96 Mar. 21
Warning lights monitor d-c supply voltage p. 106 Dec. 12
Zener diode allows delay without large capacitors p. 93 May 30
Zener diode controls variable phase shifter p. 72 Dec. 26

I

INDUSTRIAL ELECTRONICS

Microwaves on the production line p. 123 Mar. 7
Noise smulators help find peril in power-line defects p. 117 Mar. 7
Pumping new life into ruby lasers p. 115 Sept. 5

INSTRUMENTS

Automatic diagnosis of engine ailments p. 70 May 2
Charge feedback increases pulse-rate meter accuracy p. 85 Feb. 7
Correlation entering new fields with real-time signal analysis p. 75 Oct. 31
Dial any channel to 500 Mhz p. 60 May 2
Digital meters for under $100 p. 88 Nov. 28
Gamble that paid off, The: a solid state 50-Mhz oscilloscope p. 95 July 25
Harmonic testing pinpoints passive component flaws p. 93 July 11
Instrument outlook: growth and diversification p. 110 Aug. 8
Low-cost emitter-follower extends voltmeter's range p. 87 Feb. 7
Low-frequency noise predicts when a transistor will fail p. 95 Nov. 28
Multirange d-c voltmeter p. 127 Sept. 19
Noise simulators help find peril in power-line defects p. 117 Mar. 7
Phase-locked marker improves spectrum analyzer's accuracy p. 88 Feb. 7
Scattering parameters speed design of high-frequency transistor circuits p. 78 Sept. 5
Selecting the right digital voltmeter p. 84 Apr. 4
Six clues to nanovolt signals p. 114 June 13

INTEGRATED CIRCUITS

A-c testing of wafer components sounds early circuit warning p. 94 Oct. 17
Automated electron beams process thin-film components p. 110 Mar. 7
Breadboarding IC systems with color-coded modules p. 102 Jan. 10
Complex integrated circuit arrays: the promise and the problems p. 111 July 11
Digital meters for under $100 p. 88 Nov. 28
General-purpose IC chips speed analog design work p. 88 Mar. 21
Gold-plated nickel wiring debugs parallel-gap welding of IC's p. 115 July 25
IC industry: picture of health p. 114 Aug. 8
Improving the performance of multipurpose IC's with feedback p. 70 June 27
Integrated circuits and pulse coding mean new gains for telephony p. 139 Sept. 19
Integrated circuits in action, part 1: Great design dilemma, The p. 68 Oct. 17
Integrated circuits in action, part 2: Trends and trade offs p. 128 Nov. 14
Integrated circuits in action, part 3: Getting your money's worth p. 56 Dec. 26
Integrated circuits make a low-cost f-m receiver p. 133 Aug. 8
Integrated circuits quickly assembled p. 103 July 25
Integrated circuits replace the electromechanical resolver p. 90 Jan. 10
Large-scale logic arrays: testing for the millions p. 98 Oct. 17
Multipurpose chips cut costs of f-m receiver p. 80 May 16
New dimensions in IC's through films of glass p. 108 Oct. 3
Packaging revolution, The, part V: Simpler designs for complex systems p. 109 Feb. 7
Packaging revolution, The, part VI: Converting to microelectronics p. 103 Feb. 21
Pattern of tests changing for integrated circuits p. 93 Oct. 17
Reducing analog IC cost with multipurpose chips p. 84, Mar. 21
Strips of nickel foil automate welding of flatpack assemblies p. 128 June 13
Training a machine to read with nonlinear threshold logic p. 87 Aug. 22
Ultrahigh-speed IC's require shorter, faster interconnections p. 103 July 11

M

MANUFACTURING

Automated electron beams process thin-film components p. 110 Mar. 7
Belting out plastic transistors on mechanized assembly lines p. 84 Jan. 24
Ceramic handles and ultrasonic bonders upgrade hybrid assembly p. 110 Feb. 21
Coordinate measurer puts old boards into new line p. 118 Apr. 18
Fixture shaves 10-minutes from module-making time p. 117 Apr. 18
Gold-plated nickel wiring debugs parallel-gap welding of IC's p. 115 July 25
Graphs reveal reasons for high cost of maintenance p. 101 Sept. 5
Integrated circuits quickly assembled p. 103 July 25
Machine soldering gets IC's into tighter spots p. 116 Apr. 18
Modular arrays—the path to single-circuit systems p. 115 Feb. 21
Modules are mass-produced, but systems are one-of-a-kind, The p. 102 June 27
Multilayer circuit boards: sharpening an imperfect art p. 141 Aug. 8
Packaging revolution, The, part V: Simpler designs for complex systems p. 109 Feb. 7
Packaging revolution, The, part VI: Converting to microelectronics p. 103 Feb. 21
Pattern trims design time for multilayer circuit boards p. 148 Aug. 8
Strips of nickel foil automate welding of flatpack assemblies p. 128 June 13
Ultrahigh-speed IC's require shorter, faster interconnections p. 103 July 11

MARKETS

Electronics markets: faster growth in 1966 p. 117 Jan. 10
European electronic markets 1967 p. 79 Dec. 26
How the West was won p. 102 Aug. 8
IC industry: picture of health p. 114 Aug. 8
Instrument outlook: growth and diversification p. 110 Aug. 8
IEEE Show: few surprises p. 88 Mar. 7
Microwave—in tune with the times p. 106 Aug. 8

MATERIALS

Looking through glasses for new active components p. 129 Sept. 19
New dimensions in IC's through films of glass p. 108 Oct. 3

MEASUREMENTS

A-c testing of wafer components sounds early circuit warning p. 94 Oct. 17
Adapter for curve tracer tests FET's at high voltage p. 104 Mar. 7
Audio discriminator measures large frequency changes p. 76 May 2
Automatic diagnosis of engine ailments p. 70 May 2
Built-in testing, once a luxury, is essential for mission success p. 103 Oct. 17
Correlation entering new fields with real-time signal analysis p. 75 Oct. 31
Fast pulse generator tests digital circuit delay p. 88 Feb. 21
Harmonic testing pinpoints passive component flaws p. 93 July 11
High MOS impedance benefits pH measurement p. 79 July 11
Large-scale logic arrays: testing for the millions p. 98 Oct. 17
Low-frequency noise predicts when a transistor will fail p. 95 Nov. 28
Modified tape recorder stores timing signals p. 75 June 27
Pattern of tests changing for integrated circuits p. 93 Oct. 17
Phase-locked marker improves spectrum analyzer's accuracy p. 88 Feb. 7
Scattering parameters speed design of high-frequency transistor circuits p. 78 Sept. 5
Selecting the right digital voltmeter p. 84, Apr. 4
